Sim-trained balance policies, closed loop in the sim with one thing changed (4 min each), vs on the robot
table: Median |forward| (mm/s)
table: Mean turn (mm/s)
table: Tilt-rate spread (deg/s)
table: Mean tilt (deg)
carpet: Median |forward| (mm/s)
carpet: Mean turn (mm/s)
carpet: Tilt-rate spread (deg/s)
carpet: Mean tilt (deg)
balance point moved from the one it trained with (deg)
sim, balance point moved
sim, one wheel 0.85x
sim, one wheel +0.03
real robot (same policy)
